The improvement is for a method of operating nuclear reactor core comprising an initial operating plan developed in expectation of an in-cycle shutdown wherein the in-cycle shutdown time is selected with a shuffling strategy developed to maximize the said reactor output energy based on moving one or more fuel bundles compared to continuing reactor operations without shutting down the said nuclear reactor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
